

# Boxed power supplies with battery charging circuit

These switch-mode power supply units are designed for wall mounting and are intended to be fitted within an electrical cupboard. The lockable boxes feature clearly labeled LEDs, providing a visual indication of the operating status as well as notifications for low battery levels (if applicable).

They are equipped with a battery charging circuit that includes deep discharge protection, preventing the battery from discharging below the minimum voltage.

For optimal performance and safety, it is recommended to install these units in a clean, dry environment with adequate ventilation to prevent overheating. Avoid placing them in areas prone to extreme temperatures, excessive dust, or moisture. Ensure they are easily accessible for maintenance and inspection.

## PSU-12V3A

### Switch Mode Power Supply

- 220Vac power input
- 12Vdc 3Amp output
- Deep discharge protection
- LED Indicators
- Lockable
- Battery charging circuit
